CLEANLOOP NON-FERROUS PUMP STATION

The **NFP Series Non-Ferrous Pump Station** is designed to isolate plant water from your low-conductivity high purity water.

The electromagnetic field generated by an induction coil will interact with dissolved minerals (especially iron) in the cooling water, causing them to come out of solution in the critical areas of your induction equipment. These deposits cause equipment to run hot, accelerate corrosion and can completely clog cooling passages.

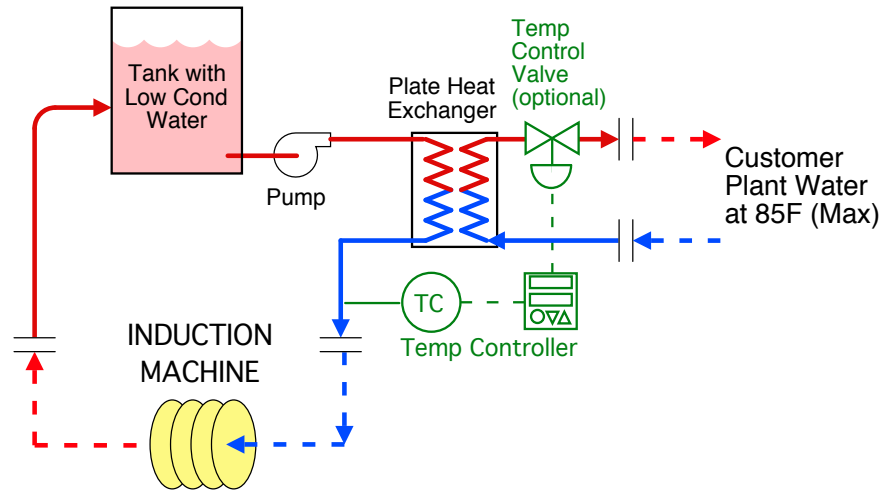

INDUCTION EQUIPMENT COOLING PACKAGES WITH PURPOSE

Engineered For:
Power Supplies
Transformers
Generators
Inductors
Rectifiers

TYPICAL PROCESS DIAGRAM

STANDARD FEATURES

- Completely non-ferrous wetted components
- Cleanable, all-stainless steel plate heat exchanger
- Stainless steel or plastic tank
- Low level switch in tank
- Stainless steel pump
- Temperature control valve to prevent over-cooling and condensation
- Compact design
- Quiet operation

OPTIONAL UPGRADES

- Duplex backup pump
- Elevated tank
- High temperature and low pressure alarm
- Thermostatic mixing valve
- Remote operation
- Pump safety switches
